Chapter 1. Introduction

1.1. About this User Guide

Target Audience

This guide is intended to guide Economic Operators in using the DPP Registry.

Scope and Coverage

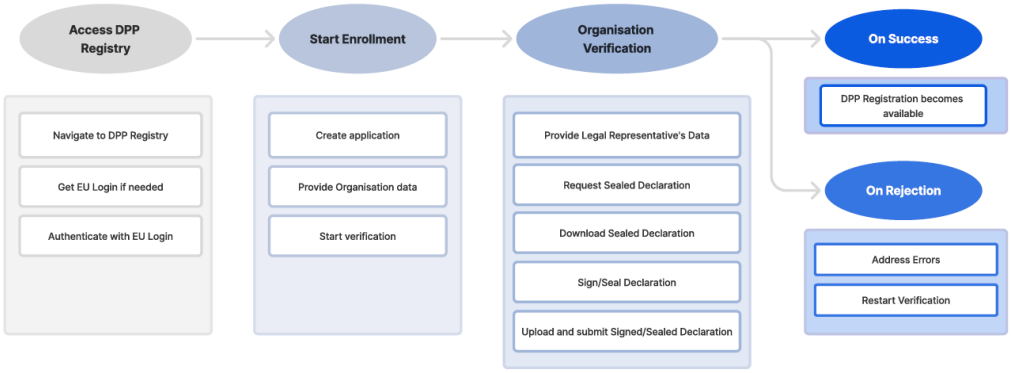

This document provides relevant information and instructions regarding:

- Organisation Enrolment and Verification
- Registration of DPPs

Chapter 2. Economic Operators and the DPP Registry

To register DPPs, your organisation must first be verified. Under Regulation (EU) 2024/1781, only verified economic operators may register and manage Digital Product Passports (DPPs).

Here's a broad overview of your journey as a new organisation in the DPP Registry, considering the necessary steps:

Economic Operators Journey in the DPP Registry

1. **Accessing the DPP Registry: Create an EU Login ¬** If you do not yet have an EU Login, you will need to create one first, as this account is used for authentication in the DPP Registry. You may also want to create a new EU Login account if you need to associate an EU Login account with a different email address for accessing the DPP Registry.
   See Getting an EU Login.
2. **Enrolment: Create and Verify your Organisation ¬** As a new user to the platform, after authenticating in DPP Registry with your EU Login, you will land on the DPP Registry's Welcome page. From here you can start a fully guided process of enrolment by providing all the requested information.
   See Enrolment.

   This information will enable the European Commission(EC) to verify your organisation.

Once verified, you can go on to perform all the operations available in the DPP Registry following your permissions.

NOTE	After successful verification you become the Administrator of this new organisation in the DPP Registry.

- **Register the DPP ¬** Once you have the DPP ready, register it in the DPP Registry by providing the requested data via one of the available submission methods. You will need to provide the Unique Product Identifier (UPI), which needs to resolve to where you have hosted the DPP Data in question.
  See also, DPP Registration.

- **Access the Help Center¬** Always accessible, the Help Center provides useful resources such as user documentation, Helpdesk contacts, FAQs and access to the test environment. See also, Help Center.

- **Test Environment ¬** Explore DPP features and workflows in a safe test environment. See also, Test Environment.

Chapter 3. Accessing the DPP Registry

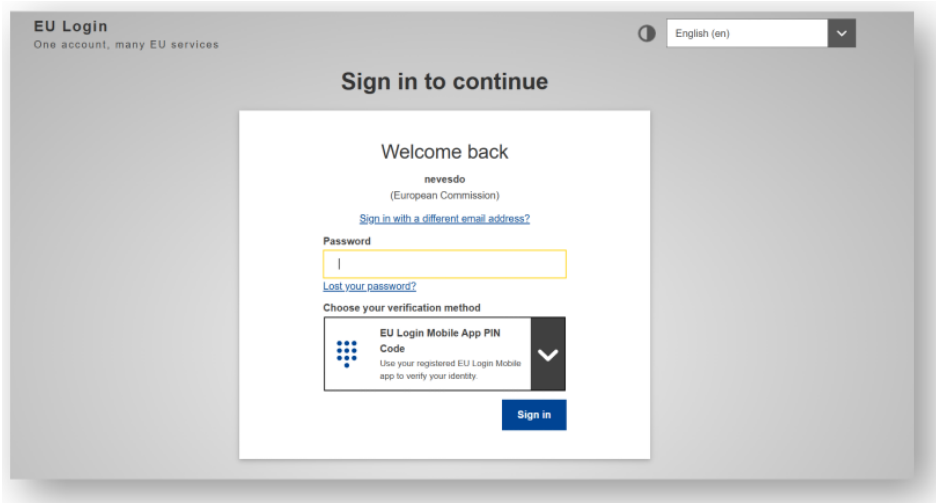

From your browser navigate to https://registry.product-passport.ec.europa.eu/.

DPP Registry user authentication is performed via EU Login, so you will be automatically redirected to the EU Login sign-in page.

When successfully authenticated, you will be automatically redirected to the DPP Registry's Welcome page.

3.1. Logging in and Authenticating

If you already have an EU Login, enter your credentials to sign in to the DPP Registry. After successful authentication, the DPP Registry's Welcome page will be displayed.

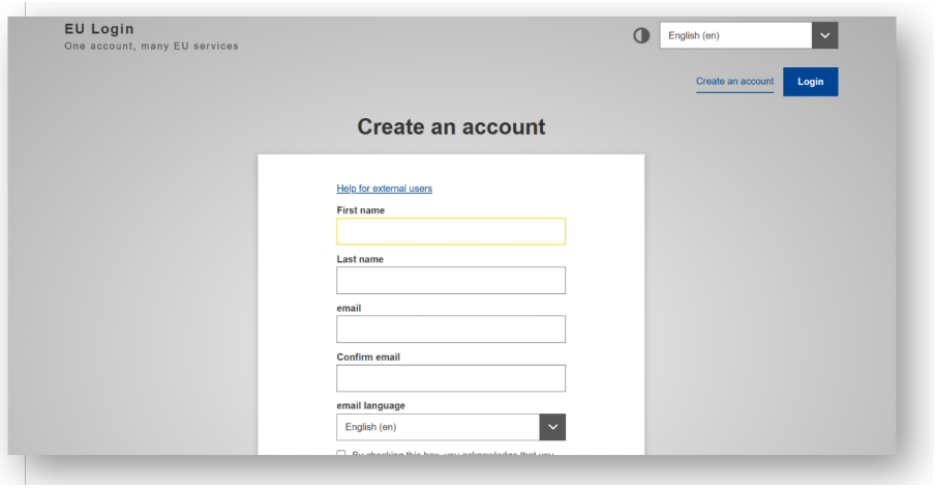

Users without EU Login

If you do not yet have an EU Login account, see how to get a new EU Login in the section below.

3.2. Getting an EU Login

EU Login accounts allow users to access various EU resources with a single account. Users who do not already have an account must create one to access the DPP Registry.

To create an EU Login:

1. Click here to open the EU Login sign-in page.

TIP	When navigating to the DPP Registry, you are automatically redirected to this page (EU Login sign-in).

2. Click on the Create an account link.
3. Fill in the form fields.
4. Review the Privacy Statement, select the checkbox, then click [Create an account], to submit the account request.

You should receive an email allowing you to confirm the registration.

Additional Resources

- For step-by-step instructions, see:
  - How do I create my EU Login account?
- For troubleshooting information, see:
  - Help for external users.

    This link is visible above the form in the EU Login "Create an account" page.

Chapter 4. Enrolment

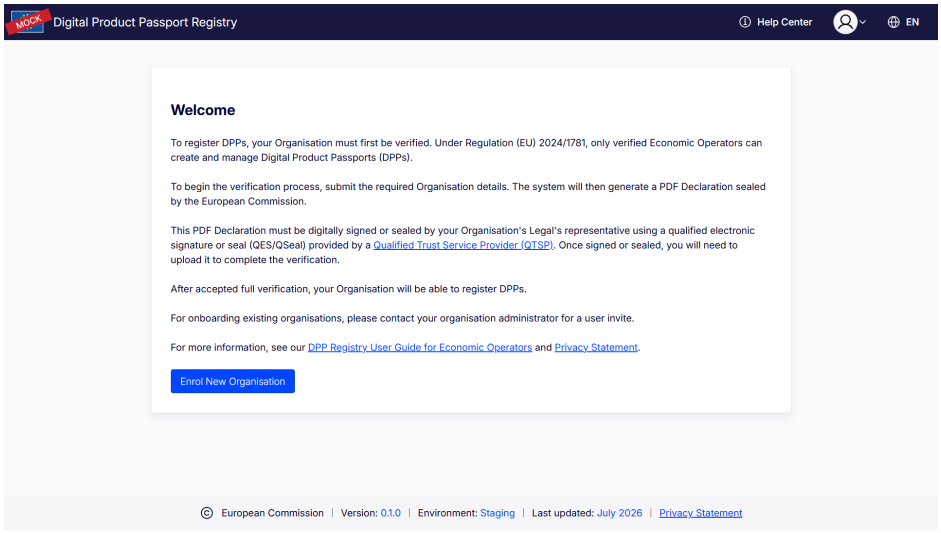

About organisation’s enrolment and verification:

Organisation Enrolment
In the DPP Registry, Enrolment is the process by which applicants provide the necessary data for the European Commission to verify they have the right to represent the economic operator they are enrolling, create their organisation’s profile, as well as the account of the administrator in the DPP Registry.

How the Organisation Verification Works
The data you provide about your organisation will be locked for editing in a PDF declaration that the European Commission will seal to ensure authenticity. That document must then be digitally countersigned or sealed offline using QES or QSeal provided by a Qualified Trust Service Provider (QTSP) and subsequently uploaded for submission. The verification process performs multiple checks to confirm the integrity, validity and authenticity of the file, the signature or seal, their associated certificates and held information. If your submitted application passes all these checks, your organisation is deemed verified. Otherwise, if the application fails one or more checks, it will be rejected. After this, you may address the identified errors and resubmit a corrected application.

4.1. Creating Your Organisation Application

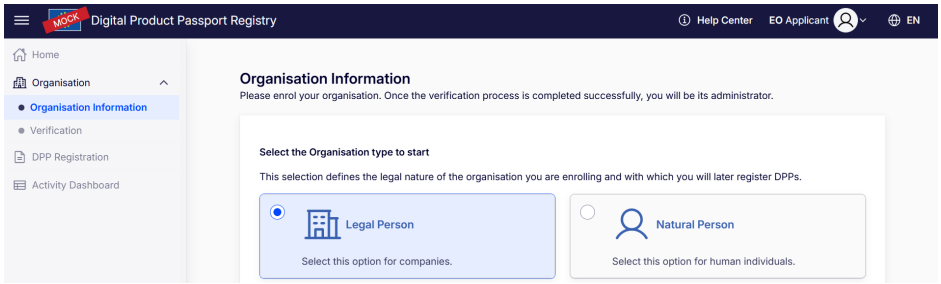

After successfully logging into the DPP Registry with your EU Login, the **Welcome** page (shown below in the figure) is displayed.

To create your organisation:

1. Click on [Enrol New Organisation].

   This will display the "Organisation Information" page.

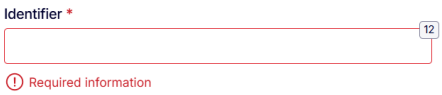

TIP

Consider the following useful information:

- If you need to pause your enrolment, on your return, the DPP Registry will show you the last page or saved operation you were able to complete.

Before filling in the Organisation Information form:

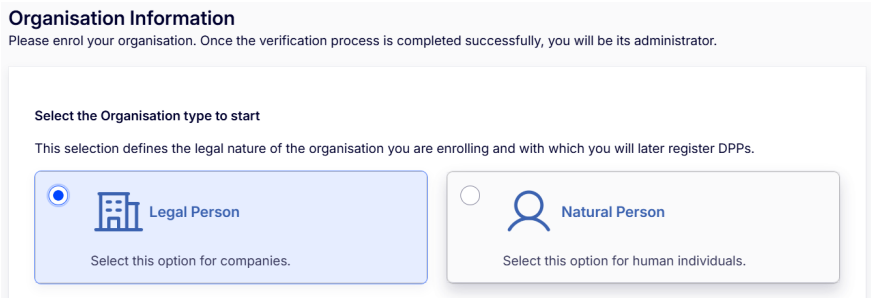

- Each form field provides a remaining character counter from its upper right corner, which starts at max length.

- Mandatory fields are indicated with a red asterisk (*). Applicants can move to the next step of the application only once mandatory data is provided.
- If you change the type of entity after entering data, this information will be lost, as this provides you a new empty form.

1. Select an Organisation type:

Types of Organisation

Indicate if the organisation you are enrolling is a Legal Person or a Natural Person, this is referring to its legal nature.

- **Legal Person** — Select this option if the Economic Operator is a legally registered organisation, such a company or other legal entity.
- **Natural Person** — Select this option if the Economic Operator is an individual acting in their own name.

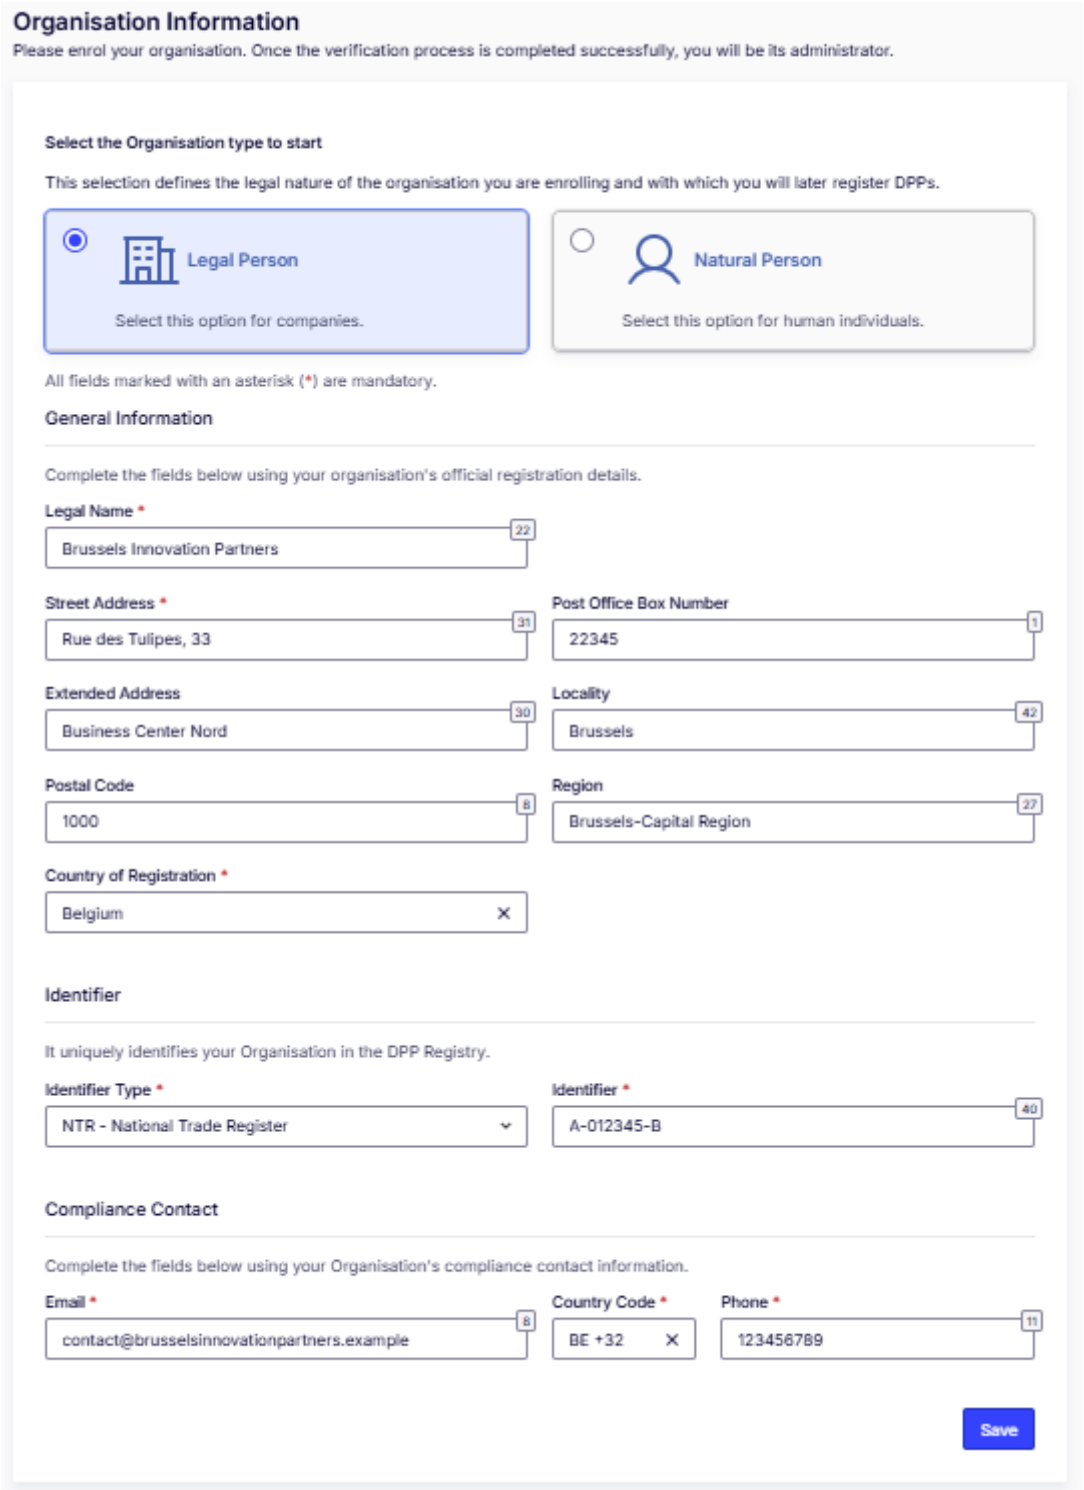

2. Provide the information required for the selected entity type.

Choose the next steps to follow based on your organisation's type:

- Legal Person;
- Natural Person.

4.1.1. Organisation Information — Legal Person

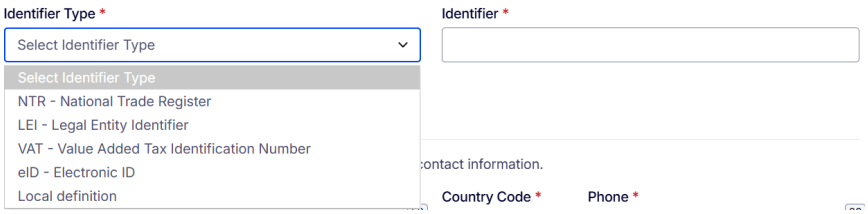

Applicants who are legal persons are requested to submit the information listed below.

1. Provide all the requested mandatory data for the selected Organisation type:
2. Provide the organisation's name:
    - **Legal name**(*) – The company's legal (registered) name, not a trading or "doing business as" name. Max length is 50 characters.
3. Provide the legal address of the organisation, in the following fields:

- **Street address**(*) – The company's official address (first line). This is the address on the company's registration, not a mailing address. Max length is 50 characters.
- **Post Office Box Number** – In addition to, or instead of, a regular address (optional). Max length is 6 characters.
- **Extended address** – Second line of the legal address (optional). Max length is 50 characters.
- **Locality** – The locality of the provided legal address, such as a municipality or a district (Optional). Max length is 50 characters.
- **Postal Code** – Postal code of the provided legal address (optional). Max length is 12 characters.
- **Region** – the region of the provided legal address, such as a province or a state (optional). Max length is 50 characters.
- **Country of Registration**(*) – Country where the organisation is registered as a legal person. It determines the law governing the entity.

4. From the "Identifier Type" pull-down menu, select the type of unique identifier you wish to provide.

- **Identifier Type** – the allowed identifiers are:
  - **NTR - National Trade Register** (*preferred) – the NTR numeric or alphanumeric value is the unique ID used to verify that an economic operator is registered in the EU. Max length is 50 characters.
  - **LEI - Legal Entity Identifier** – the LEI numeric or alphanumeric value is used to identify legally distinct entities that participate in financial transactions. LEI is global legal person identifier as specified in ISO 17442. Max length is 20 characters.
  - **VAT - Value Added Tax Identification Number** – the VAT numeric or alphanumeric value is used to identify businesses (legal taxable persons) registered for VAT purposes so tax authorities and counterparties can verify the entity's VAT status when trading across jurisdictions. VAT numbers are issued by national tax authorities under each country's VAT system. Max

length is 15 characters.

- **eID - Electronic ID** – the eID numeric or alphanumeric value, is the unique identifier associated with your eID credential (the number used to link your identity to that electronic ID system). Max length: 30 chars.
- **Local definition** – a two-letter code representing the country of registration to prefix the identifier you are providing.
  When selecting this type, from the new drop-down menu, select the appropriate code to prefix the identifier value you are providing in the identifier input box.

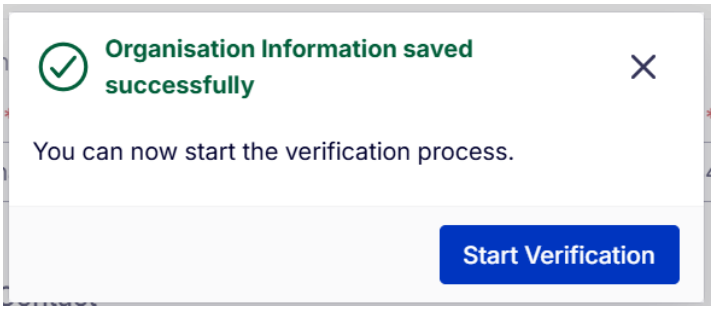

5. Provide the identifier value in the format following the selected identifier type.
   - **Identifier** – the numeric or alphanumeric identifier. Max length is 50 characters.
6. Provide the contact details to use in the context of compliance communications.

   These contact details may be used by competent authorities to contact your organisation about DPP registrations or product compliance questions. These contacts are not publicly displayed.

   - **Compliance Contact(s)**:
     - **Email**(*) – The email for the person or Department to contact regarding matters of compliance.
     - **Country Code**(*) – International country code or country calling code; the numeric prefix that identifies a country or region for phone calls.
     - **Phone**(*) – The phone number for the person or Department to contact regarding matters of compliance.
7. Click [Save].

   If errors are detected, see Organisation Information Errors.

   Otherwise, if the information provided was complete and correct in format, you will be able to save the information, and get the following confirmation message:

8. Click [Start Verification] to proceed to the verification steps.

4.1.2. Organisation Information — Natural Person

Applicants who are natural persons are requested to submit the information listed below.

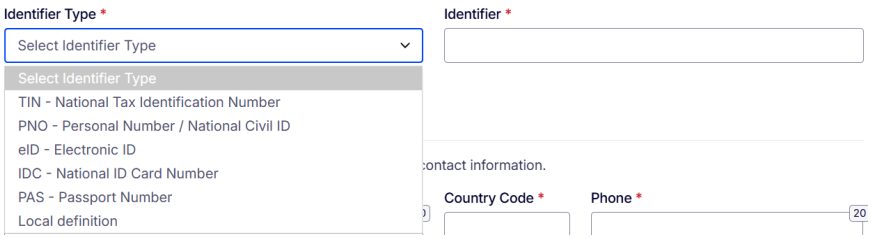

Provide all the requested mandatory data for the selected Organisation type.

1. Provide the first and last name of the natural person (organisation):
    - **First Name** (*) – The given name or personal name of the natural person (organisation). Max length is 50 characters.

- **Last Name** (*) – The surname or family name of the natural person (organisation). Max length is 50 characters.

2. Provide the legal address of the organisation, in the following fields:
   - **Street address**(*) – The organisation's official address (first line). This is the address on the organisation's registration, not a mailing address. Max length is 50 characters.
   - **Post Office Box Number** – In addition or as alternative to a regular address (optional). Max length is 6 characters.
   - **Extended address** – Second line of the legal address (optional). Max length is 50 characters.
   - **Locality** – The locality of the provided legal address, such as a municipality or a district (Optional). Max length is 50 characters.
   - **Postal Code** – Postal code of the provided legal address (optional). Max length is 12 characters.
   - **Region** – the region of the provided legal address, such as a province or a state (optional). Max length is 50 characters.
   - **Country of Registration**(*) – Country where the organisation is registered as a natural person. It determines the law governing the entity.
3. From the "Identifier Type" pull-down menu, select the type of unique identifier you wish to provide.

Identifier Type (*) – Allowed identifiers are:

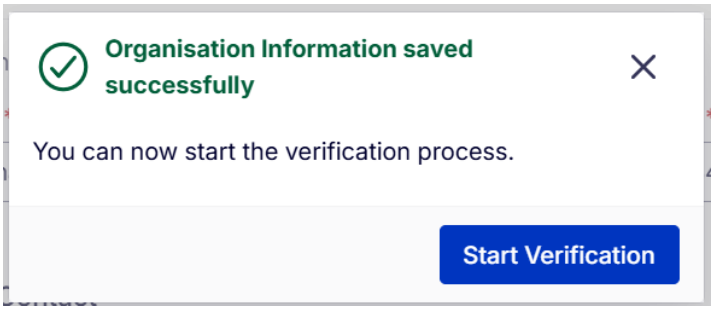

- **TIN - Tax ID** – (*preferred) the TIN numeric or alphanumeric value, is the unique national taxpayer identification number issued by a country's tax authority to identify an individual or organisation for tax purposes; used to verify tax registration and identity. Max length is 12 characters.
- **PNO - Personal Number** – the PNO numeric or alphanumeric value, is the unique national identifier assigned to an individual (e.g., social¬security or civil¬registration number), used to verify identity and residency. Max length is 11 characters.

- **eID - Electronic ID** — the eID numeric or alphanumeric value, is the unique identifier associated with your eID credential (the number used to link your identity to that electronic ID system). Max length: 30 chars.
- **IDC - National ID Card** – the IDC numeric or alphanumeric value, is the unique identifier on a country's national identity card, used to verify an individual's identity and residency. Max length is 17 characters.
- **PAS - Passport** – the PAS numeric or alphanumeric value, is the unique identifier on an individual's passport, used to verify identity and passport authenticity. Max length is 11 characters.
- **Local definition** – A two-letter code (AA) representing the country of registration of the identifier provided for the organisation.
  This will display a drop-down menu with possible local definition codes, select the appropriate code to prefix the identifier value you are providing in the identifier input box.

4. Provide the numeric or alphanumeric identifier corresponding to the selected Identifier Type.
   - **Identifier** – the numeric or alphanumeric identifier. Max length is 50 characters.
5. Provide the contact details to use in the context of compliance communications.
   These contact details may be used by competent authorities to contact your organisation about DPP registrations or product compliance questions. These contact details are not publicly displayed.
   - **Email**(*) – The email for the person or Department to contact regarding matters of compliance.
   - **Country Code**(*) – International country code or country calling code; the numeric prefix that identifies a country or region for phone calls.
   - **Phone**(*) – The phone number for the person or Department to contact regarding matters of compliance.
6. Click [Save].

   If errors are detected, see Organisation Information Errors.

   Otherwise, if the information provided was complete and correct in format, you will be able to save the information, and get the following confirmation message:

7. Click [Start Verification] to proceed to the verification steps.

4.1.3. Organisation Information Errors

If errors are detected, an error message is featured at the top of the page:

Common Errors

- "**Some required information is missing. Please review the highlighted fields.**"

This error means one or more of the mandatory fields were not supplied. Provide the missing information for the fields highlighted in red.

NOTE	The [Save] button is enabled once all mandatory information is provided.

- "**Some values do not match expected formats. Please review the highlighted fields.**"

This error indicates a value was provided in a format different from expected, such as an email not including an @ symbol, or a phone number field including letters.

4.2. Verifying your Organisation

Now that you have provided all the requested information for your organisation, you can proceed to the Verification process.

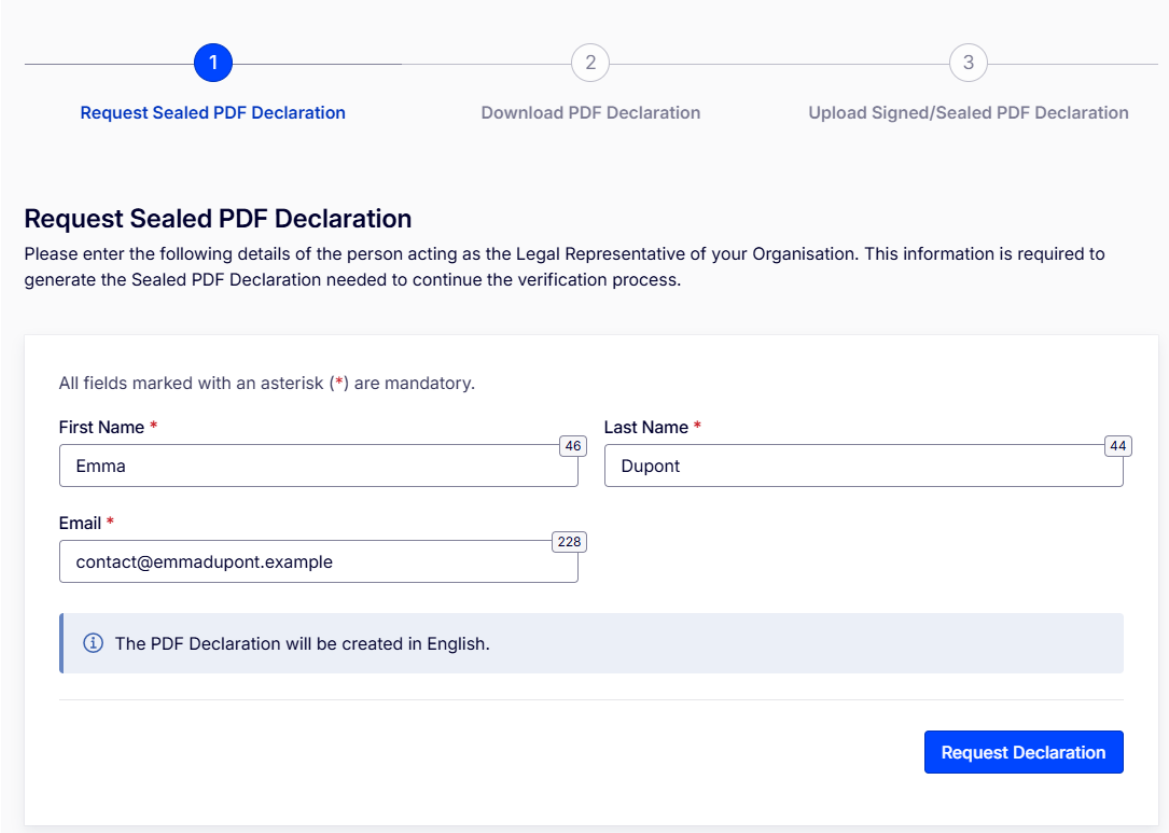

Verification Steps Overview

The verification process of the organisation entails the following steps:

1. **Provide Legal Representative's Information**
   Submit the details requested regarding the legal representative.

2. **Request Sealed PDF Declaration**
   This is the document the EC seals for legal representative to sign. Upon your request the system generates this document.
3. **Download the PDF Declaration**
   Once generated, this document becomes available for download.
4. **Sign or seal the PDF Declaration**
   The legal representative signs this declaration.
5. **Upload the signed/sealed PDF Declaration**
   Upload the EC-sealed document now signed by the legal representative.
6. **Submit the Application**
   Once done, submit the application.
7. **Check the Status of the Application**
   From the Activity Dashboard, check the status of your request.

Step 1. Provide Legal Representative's Information

To start the verification process:

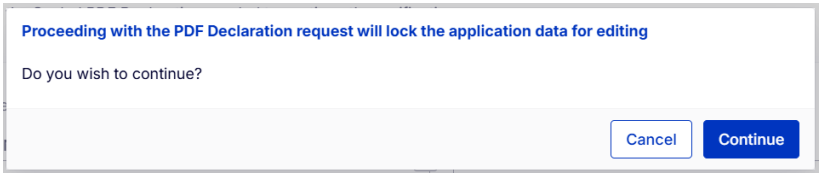

1. **Provide the legal representative's information:**

- **First Name** (*) – The given name or personal name of the person who can legally represent this organisation. Max length is 50 characters.
- **Last Name** (*) – The surname or family name of the person who can legally represent this organisation. Max length is 50 characters.
- **Email** (*) – The email of the person who can legally represent this organisation.

NOTE	Should they be different persons, the details requested are regarding the person signing this declaration and not the person, creating the application.

Step 2. Request Sealed PDF Declaration

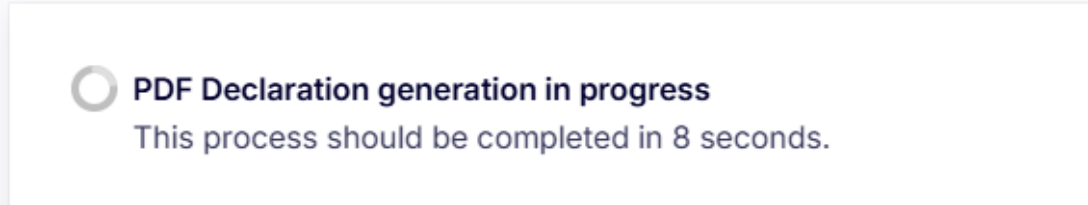

1. Click on [Request Declaration] to receive the EC-sealed PDF Declaration.
2. Click [Continue] to confirm request.

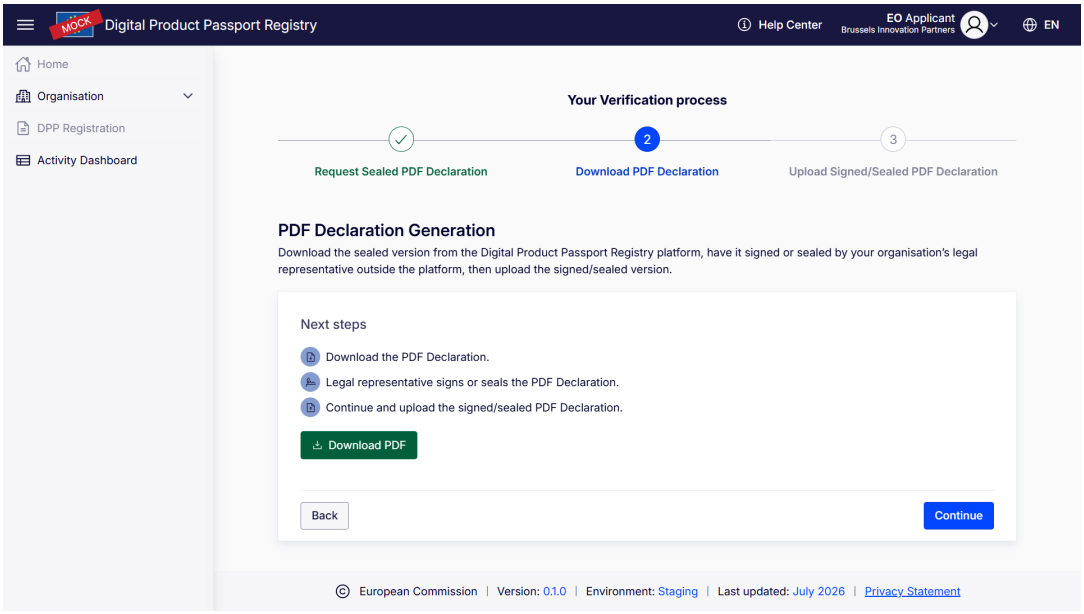

Modifying organisation details will restart verification process.

Step 3. Download the PDF Declaration

- The PDF Declaration starts being generated post confirmation.

- Once ready, the "Download PDF" button becomes available.

- Click [Download PDF]. This downloads the PDF declaration into your system.

Sample PDF Declaration for a legal person

European Product Registry for Digital Product Passport (DPP)

DECLARATION

FOR LEGAL PERSONS ACTING AS ECONOMIC OPERATORS[1]

I, the undersigned, John Doe, e-mail contact@johndoe.example, acting as the legal representative of the organisation

Brussels Innovation Partners

declare that the information detailed below is correct at the date of signing:

Legal Name: Brussels Innovation Partners
Address: Rue des Tulipes, 33 , Business Center Nord , 22345 , 1000 , Brussels , Brussels-Capital Region , Belgium
Country of Registration: Belgium
Organisation Identifier: A-012345-B
Organisation Identifier Type: NTR
Compliance Contact Email: contact@brusselsinnovationpartners.example
Compliance Contact Phone: +32 123456789

I declare that this organisation will only undertake actions within the Registry that it is legally authorised to perform.

Digitally signed

This document has been automatically generated and electronically sealed by the European Commission. It shall be electronically sealed by an authorised representative of the organisation and returned to the Commission.

European Commission

Organization European Commission

Reason DPP (Digital Product Passport)

Date 2026-07-15 09:20:40 UTC

[1]The manufacturer, the authorised representative, the importer, the distributor, the dealer and the fulfilment service provider (as from Art 2 (46) of Regulation (EU) 2024/1781)

Sample PDF Declaration for a natural person

European Product Registry for Digital Product Passport (DPP)

DECLARATION

FOR NATURAL PERSONS ACTING AS ECONOMIC OPERATORS

I, the undersigned, John Doe, e-mail contact@johndoe.example, acting as the legal representative declare that the information detailed below is correct at the date of signing:

First Name: John
Last Name: Doe
Address: Rue des Tulipes 33 , Business Center Nord , 22345 , Brussels , Brussels-Capital Region , Belgium
Country of Registration: Belgium
Identifier: A-012345-B
Identifier Type: TIN
Compliance Contact Email: contact@johndoe.example
Compliance Contact Phone: +32 123456789

I declare that I will only undertake actions within the Registry that I am legally authorised to perform.

This document has been automatically generated and electronically sealed by the European Commission. It shall be electronically sealed by an authorised representative of the organisation and returned to the Commission.

European Commission

Organization European Commission Test Services
Reason DPP (Digital Product Passport)
Date 2026-07-17 06:15:02 UTC

[1]The manufacturer, the authorised representative, the importer, the distributor, the dealer and the fulfilment service provider (as from Art 2 (46) of Regulation (EU) 2024/1781)

NOTE Currently, this PDF Declaration is only provided in English.

Step 4. Sign or Seal the PDF Declaration

1. Have the legal representative's sign/seal the EC-sealed PDF Declaration. This step is performed outside the DPP Registry.
2. When ready, click [Continue] to proceed with the verification.

IMPORTANT The PDF declaration must be digitally signed or sealed by

your organisation's legal's representative using a:

- **Qualified electronic seal (QSeal)** provided by a Qualified Trust Service Provider (QTSP), where the economic operator acting as **Legal Person**, or;
- **Qualified electronic signature (QES)** provided by a Qualified Trust Service Provider (QTSP), where the economic operator is a **Natural Person** acting as sole trader.

More info

What is QES and QSeal

QES and QSeal are qualified trust services defined under the eIDAS Regulation and represent the highest level of electronic signature and electronic seal.

What is a Qualified Trust Service Provider (QTSP)

A QTSP is an accredited organisation authorised to issue qualified certificates; signatures made with their certificates meet higher legal standards.

Is a QTSP listed in the Trusted List Browser recognized as a QTSP in all Member States?

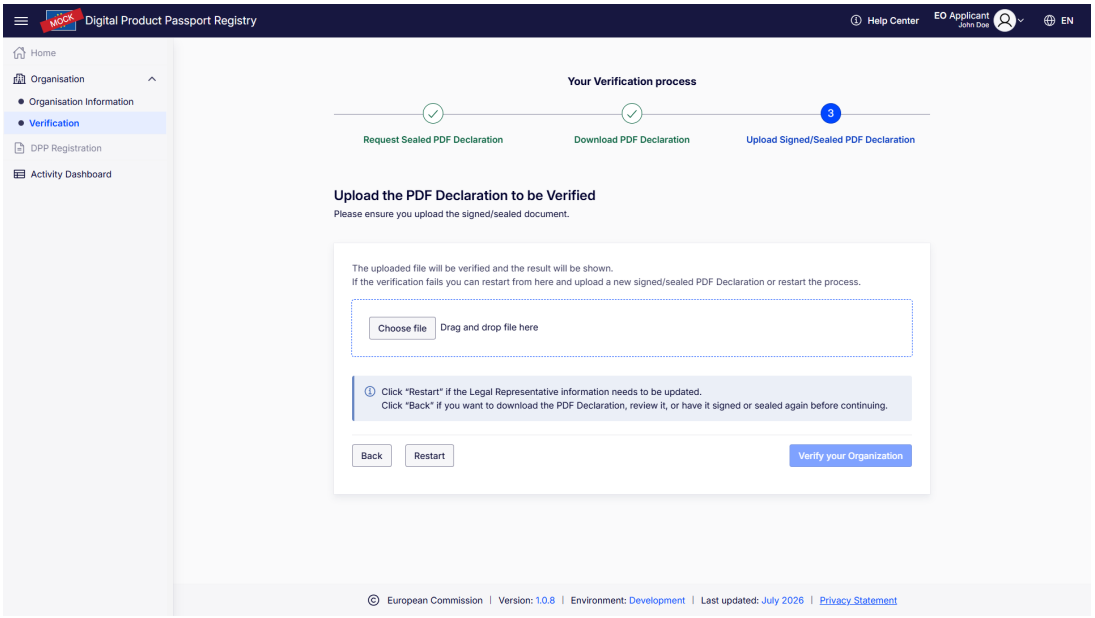

One of the goals of the 'qualified' status is to achieve cross-border interoperability and recognition of electronic products and trust services across all Member States. As such, a qualified product delivered by a qualified trust service under a Qualified Trust Service Provider (QTSP) based in any Member State will be considered qualified in every Member States.

A trusted list of qualified trust service providers following the EUDI Framework published by the Member States of the European Union and European Economic Area can be found here: https://eidas.ec.europa.eu/efda/trust-services/browse/eidas/tls (EU/EEA Trusted List Browser).

Source: eSignature FAQ

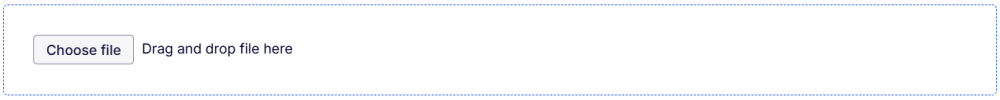

Step 5. Upload the signed/sealed PDF Declaration

1. Upload the PDF Declaration.

To upload the file, you can either:

- Click [Choose File] to browse your file system and select the signed document, or
- Drag and drop it in the area delimited by the dashed blue line:

File Requirements

Please upload the previously downloaded EC¬sealed document now countersigned or sealed, so a PDF file is expected; other formats will be rejected.

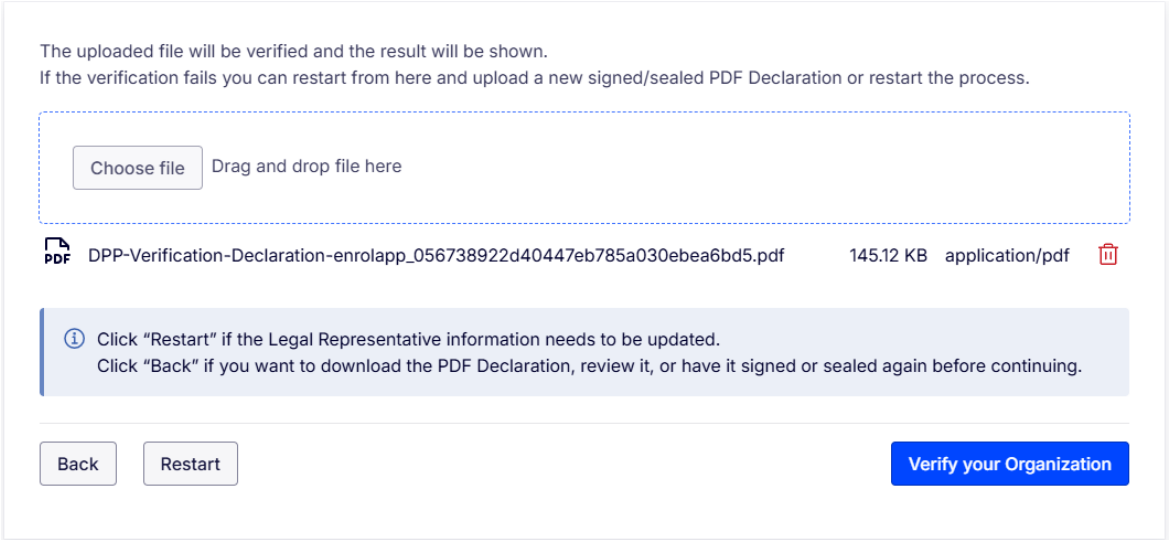

The maximum file size allowed is 1 GB.

Verification Steps Navigation

At any time you can:

- Click [Back] if you need to download the PDF Declaration or revisit the previous step(s).
- Click [Restart] to jump directly to the Legal Representative's details for reviewing or editing data.

Once the upload is complete it will be listed on the page. Click on the Delete icon, if you need to remove or replace the file uploaded.

Step 6. Submit the signed/sealed PDF Declaration

1. Submit the file for verification.

   If you are ready to proceed, click on [Verify your Organisation].

2. Click [Continue] to proceed.

This page will refresh to either show:

- the operation is ongoing;
- or the final outcome when verification is completed.

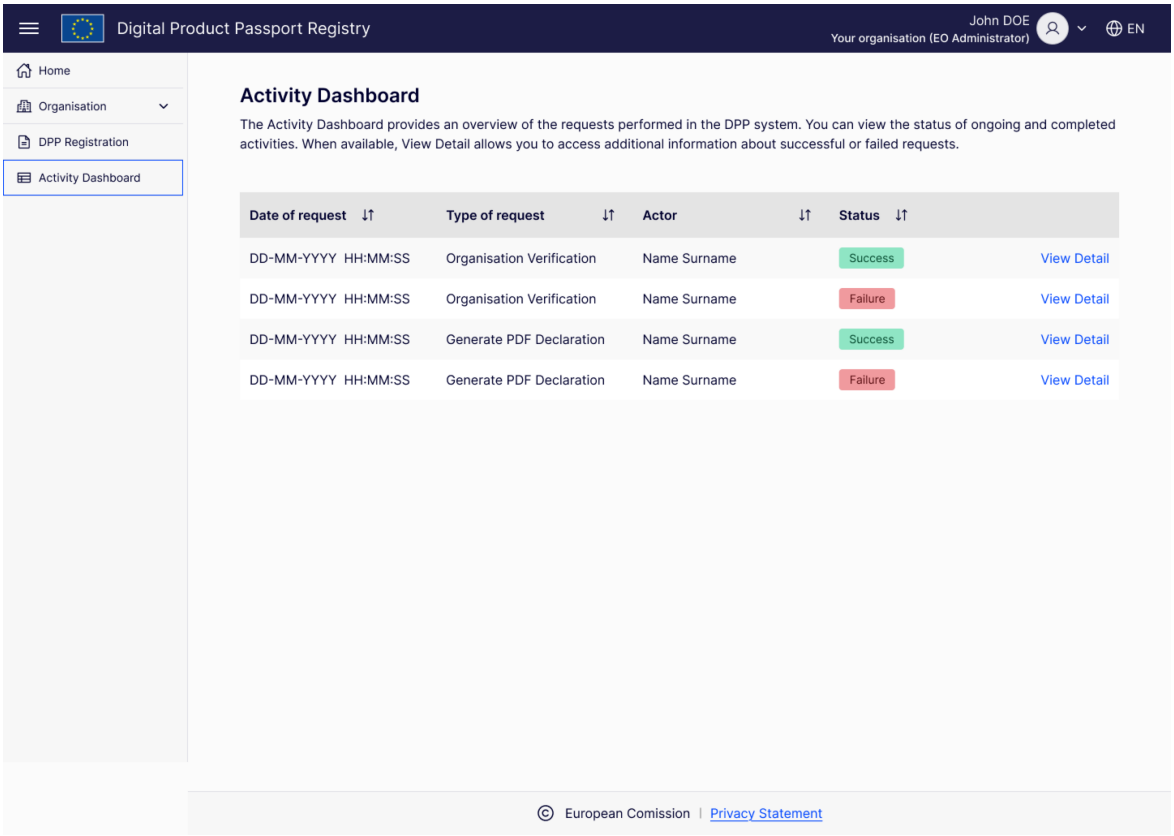

Step 7. Check the Status of the Application

You can consult the status of your submission in the **Activity Dashboard**.

4.3. Checking Application Status

For each request, the Activity Dashboard lists the following data:

- Date of request (and timestamp);
- Type of request;
- Actor (or user who has submitted the request);
- Status;
- View Detail.

Regarding operations performed during enrolment, you can see two types of requests:

- **Generate PDF Declaration** — This dashboard record indicates the status of the request for the generation of the PDF declaration, so you can track if file generation is ongoing or complete, or if there was an error.
- **Organisation Verification** — This dashboard record indicates the status of the validation of your submission. If complete, then the outcome will provide you more information.

Organisation Verification Outcomes

Organisation Verification requests can have three different statuses:

- **`PROCESSING`** — These requests are not yet fully processed, so no outcome was yet produced.
- **`SUCCESS`** — Your application was accepted. As a result, your organisation has been verified and registration operations have become available in the DPP Registry.
- **`FAILURE`** — Your application was rejected. As a result, an error report has been generated. This report details why your application was rejected. You will need to correct the identified issues and repeat the process.

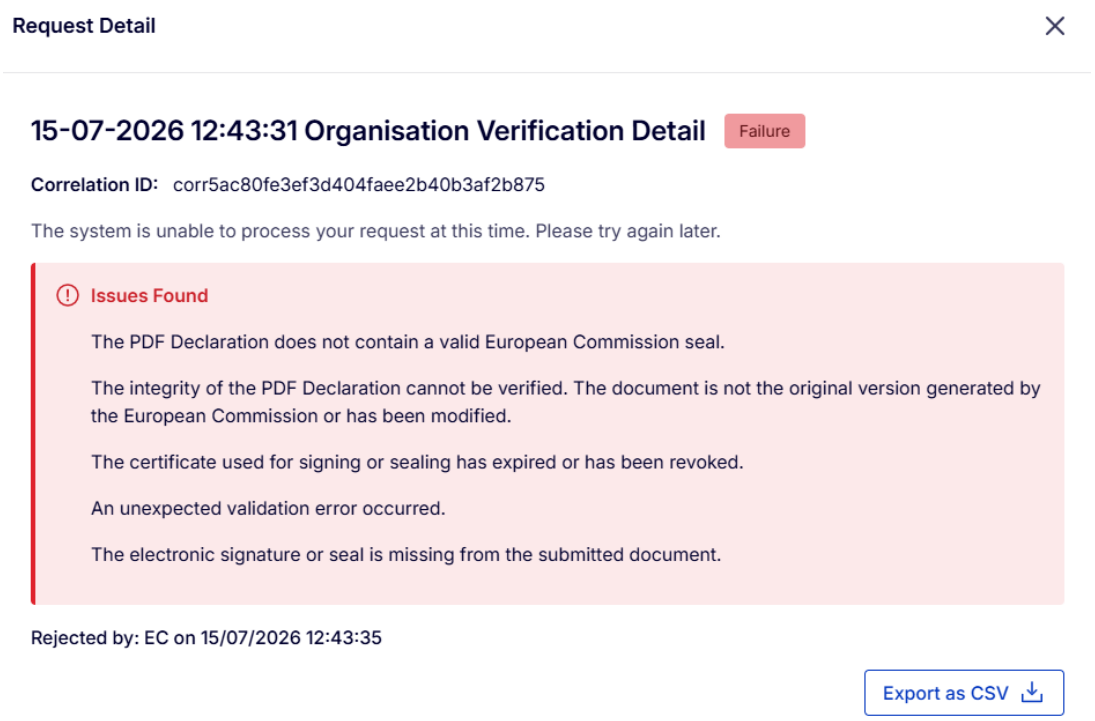

Organisation Verification Details

For requests with,

- **SUCCESS** as outcome: the *View Details* link will provide a success report containing the expiration day of the signature/seal.

- **FAILURE** as outcome: the *View Details* link will provide an error report, which you can copy and save independently.

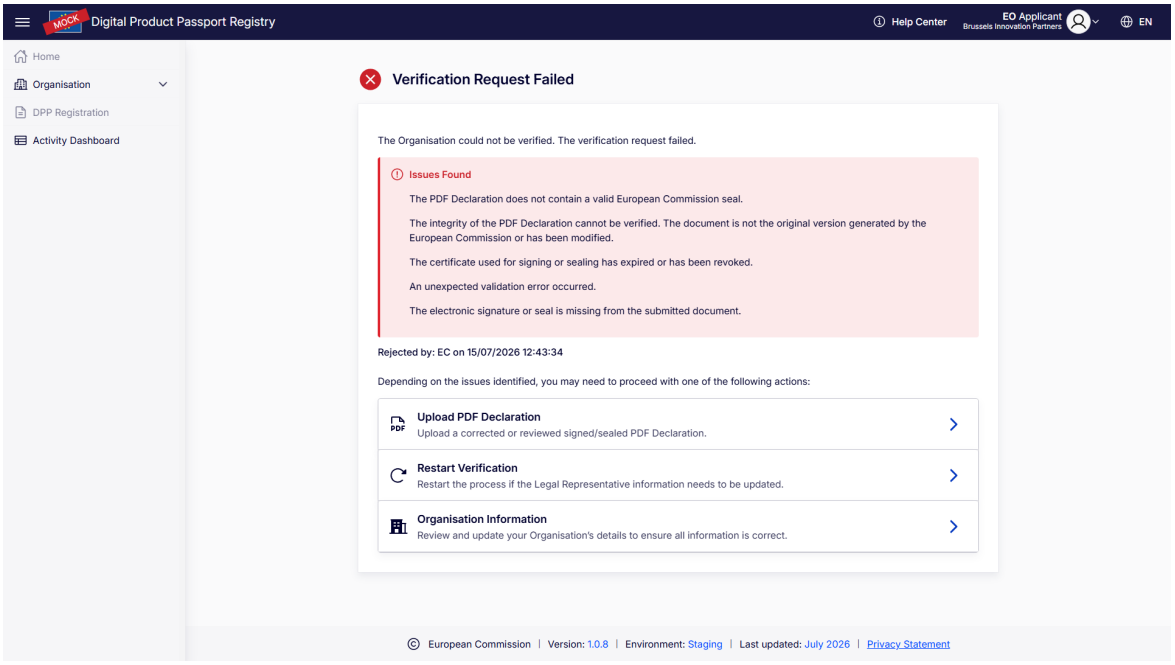

NOTE Once your application has been processed, and the outcome is

VERIFIED, you will be made Administrator of this new organisation in DPP Registry.

4.3.1. Rejected Applications and Error Reports

If verification failed, this means your organisation could not be verified. The error report details are instrumental in helping check and address the rejection reasons.

Verification Outcome

If your application was rejected, one or more of the following errors may be reported:

- **"The document does not contain the required number of signatures. Exactly two signatures are expected: the Commission institutional seal and the organisation's countersignature or counterseal."**
  Occurs when the PDF used for verification is missing the Commission institutional seal, the organisation's countersignature or counterseal, or both.
- **"The countersigned document does not match the original declaration sealed by the Commission. This may indicate that the document was altered after the Commission seal was applied, or that a different document was signed instead of the one provided. The countersignature or counterseal must be applied to the original sealed declaration without any modifications."**
  This means that either the original EC-sealed PDF Declaration was modified after being sealed by the Commission, or a different document was used for

countersignature or counterseal. Please countersign or counterseal the original EC-sealed PDF Declaration without making any changes to it, and then resubmit.

- **"The Commission institutional seal is missing from the document."**
  This means that the submitted declaration is not the declaration that was generated and sealed by the European Commission. First generate the EC-sealed PDF Declaration, then countersign or counterseal the same document before resubmission.

If you get one of the following errors:

- **"The Commission institutional seal is present but could not be validated. Please restart the verification process."**
- **"The identity contained in the Commission seal does not match the expected identity. Please restart the verification process."**
- **"The Commission seal does not meet the required Qualified Electronic Seal (QSeal) level. Please restart the verification process."**
- **"The qualification level of the Commission seal could not be determined. Please restart the verification process."**
- **"The Commission seal does not conform to the required PAdES Baseline signature format (B, T, LT, or LTA level). Please restart the verification process."**
- **"The Commission seal validation did not pass. The seal status is invalid or could not be determined. Please restart the verification process."**
- **"The certificate used for the Commission seal is not trusted, has been revoked, or could not be verified against a trusted certificate authority. Please restart the verification process."**
  This means the submitted declaration does not match the declaration generated and sealed by the European Commission, or the file may be corrupted or have been modified. After downloading the declaration, the only permitted change is to add your organisation's qualified electronic signature or qualified electronic seal. Any other change to the file will invalidate the declaration. Please restart the verification process and submit a new declaration.
- **"The organisation's countersignature or counterseal is missing from the document."**
  This means the document was not counter-signed or sealed. Proceed to sign/seal the EC-sealed PDF Declaration before resubmission.
- **"The organisation's countersignature or counterseal is present but**

could not be validated."
This means the organisation's countersignature or counterseal is present, but its validity could not be verified. The electronic signature/seal may be invalid, corrupted, or based on an untrusted certificate. Please apply a valid countersignature or counterseal and resubmit the PDF Declaration.

- **"The information specified in the electronic signature or seal does not match the information provided in the organisation details."**
  Results when any of the information provided in the organisation details (featuring in the verified PDF Declaration) does not match the QES/QSeal that was used to sign or seal the submitted declaration, such as the organisation's identifier, the country of registration and either the legal name or the natural name of the organisation, depending on its type.
- **"The organisation's seal does not meet the required Qualified Electronic Seal (QSeal) level. Legal persons must use a qualified electronic seal."**
  This means the PDF Declaration was sealed using a non-qualified electronic seal. As a Legal person, you must use a valid Qualified Electronic Seal (QSeal) and resubmit the PDF Declaration.
- **"The organisation's signature does not meet the required Qualified Electronic Signature (QES) level. Natural persons must use a qualified electronic signature."**
  This means the PDF Declaration was signed using a non-qualified electronic signature. As a Natural persons, you must use a valid Qualified Electronic Signature (QES) and resubmit the PDF Declaration.
- **"The required qualification level for the organisation's signature or seal could not be determined."**
  This means the qualification level of the certificate could not be established because the certificate does not contain the eIDAS-qualified attributes required for a Qualified Electronic Seal (QSeal) or Qualified Electronic Signature (QES). Please contact your Qualified Trust Service Provider (QTSP) to verify your certificate and ensure it meets the QSeal or QES requirements before resubmission."*
- **"The organisation's signature or seal does not conform to the required PAdES Baseline signature format (B, T, LT, or LTA level). For more details please check the DPP Registry User Guide for Economic Operators."**
  This may occur if the document was signed using an unsupported signing tool or incorrect signature settings. It can also result from a missing trusted timestamp, missing long-term validation information, or because the validation data was not embedded in the PDF as required. Please ensure that the document is signed using a compliant PAdES Baseline profile and

then resubmit.

- **"The organisation’s signature or seal validation did not pass. The signature status is invalid or could not be determined."**
  This means the organisation’s electronic signature or seal could not be successfully validated. The electronic signature or seal may be invalid, corrupted, unsupported, or its validation status could not be determined. Please verify the electronic signature or seal and resubmit the PDF Declaration.
- **"The certificate used for the organisation’s signature or seal is not trusted, has been revoked, or could not be verified against a trusted certificate authority."**
  This means the certificate used for the organisation’s electronic signature or seal could not be trusted. The certificate may have been revoked, may not be issued by a trusted certificate authority, or its trust status could not be verified. Please use a valid and trusted certificate and resubmit the PDF Declaration.

4.3.2. Reviewing Issues and Courses of Action

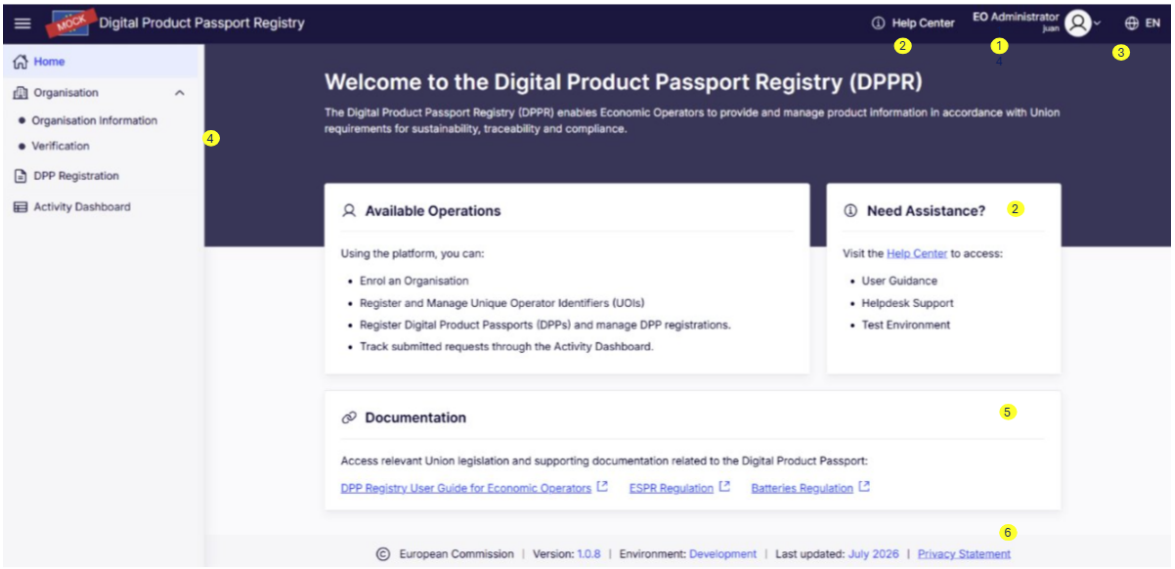

From the Verification outcome page, you may need to proceed with one of the following actions:

- **Upload PDF Declaration**
  Use this option to jump directly to the upload file page, if/when you have the corrected PDF Declaration ready to upload.
- **Restart Verification**
  Use this option to jump to the page where you can review and edit the organisation’s legal representative details and request a new PDF Declaration.
- **Organisation Information**
  Use this option to go directly to the page where you can review and edit the provided organisation’s details.

Chapter 5. Homepage

Once your organisation is verified, you will land on the homepage in your next sessions.

- **(1) User Profile Menu** — Information of the logged-in user, their user role, and/or selected Organisation is presented here. After clicking to expand, you have the following options:
    - *My Profile Information* — In this area your assigned role, and your organisation's name will be visible.
    - *Sign-out* — Option to terminate your session in the DPP Registry.
- **(2) Help Center** — Page centralising helpful resources: Summary of available operations, and link to the Help Center page.
- **(3) Language** — The DPP Registry is available in English.
- **(4) Side Menu** — From the side menu, you can find the available operations organised as follows:
    - Organisation
        - Organisation Information
        - Verification
    - DPP Registration
    - Activity Dashboard
- **(5) Documentation** — Relevant Union legislation and supporting documentation related to the Digital Product Passport.
- **(6) Footer** — The site's footer features, besides the privacy statement, the

information regarding the environment in question (Production), but also its current version.

Chapter 6. DPP Registration

The DPP Registry does not store the full DPP data. Instead, it records a subset of information necessary to identify and access the DPP, such as unique product identifiers and the location where the passport is hosted.

The complete DPP data — including all product, sustainability, and compliance information — remains hosted and maintained by you, the economic operator (or a service provider you designate). You are responsible for ensuring its availability and accuracy throughout the DPP's lifecycle, including any updates over time.

6.1. Creating and Registering a DPP

The difference between the DPP and its Registration Record at a glance.

DPP Registration Record

At a glance:

- **What it is:**
  - The DPP Registration Record is an EU-level digital record that registers identifiers referencing DPPs created by verified Economic Operators. It is not the full digital passport data.
  - **Purpose:** Authoritative index for compliance checks, authorities' search and cross-border enforcement.
  - **Lifecycle role:** Supports referencing, discovery, and validation; helps link product-level updates and surveillance workflows.
- **Content:** Registration metadata and links/identifiers (e.g., unique product identifier, etc.), semantic validation/interoperability metadata and access rules — not the full technical dataset (data structure).
- **Where it is stored:** In the DPP Registry's database, an European Commission central *registration* repository for DPPs.
- **Who controls it:** The European Commission/public infrastructure; no subscription fee expected; only verified economic operators can register DPPs.

DPP Data

At a glance:

- **What it is:**

    - A data structure, with full contents of the DPP, or the DPP Data. A data instance following a pre-defined specification for a DPP.
- A data structure created independently and after the requirements, technical and other, dictated by the legislation that frames the product it is to go with.
    - **Purpose:** Provide all the required information. Presented to consumers as result of reading a data carrier (encoding an UPI; see Glossary). Must be resolvable at all times.
- **Content:** At minimum the required attributes from the schema. At maximum the set of required and optional attributes defined in the authoritative schema.
- **Where it is stored:** The economic operator's or a service provider's database.
- **Who controls it:** The economic operator has full control and responsibility.

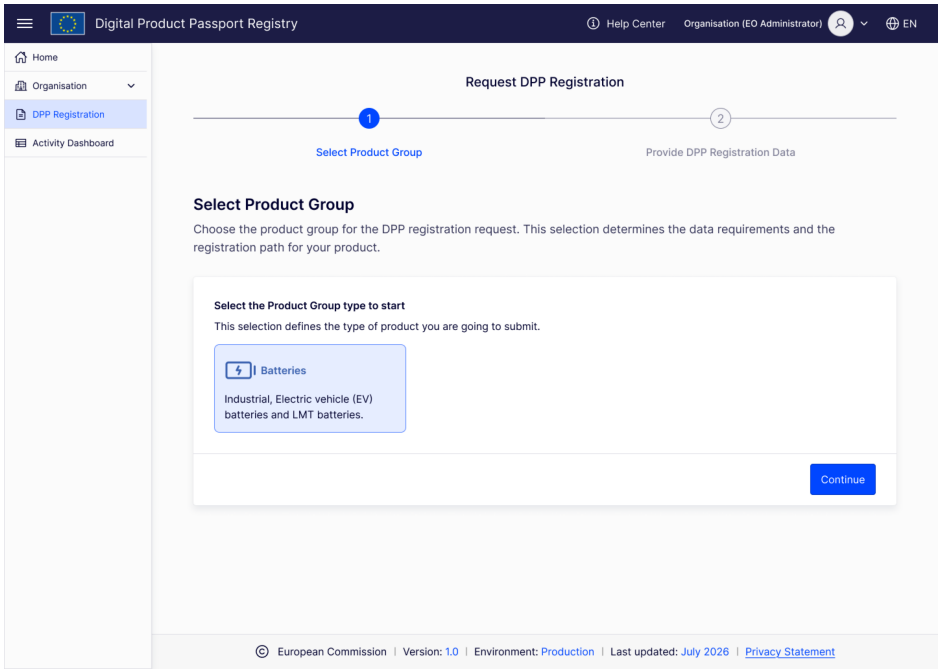

6.2. Registering a DPP

At this point the DPP has been created with the required information. Once you have the DPP or DPPs ready, you can register them in the DPP Registry.

6.2.1. How to register a DPP

IMPORTANT	Successful registration of DPPs for batteries is not currently available, as the semantic catalogue for this product group has not yet been defined. Currently, it is not possible to successfully register DPPs.

To register a new DPP, from the side menu select **DPP Registration**:

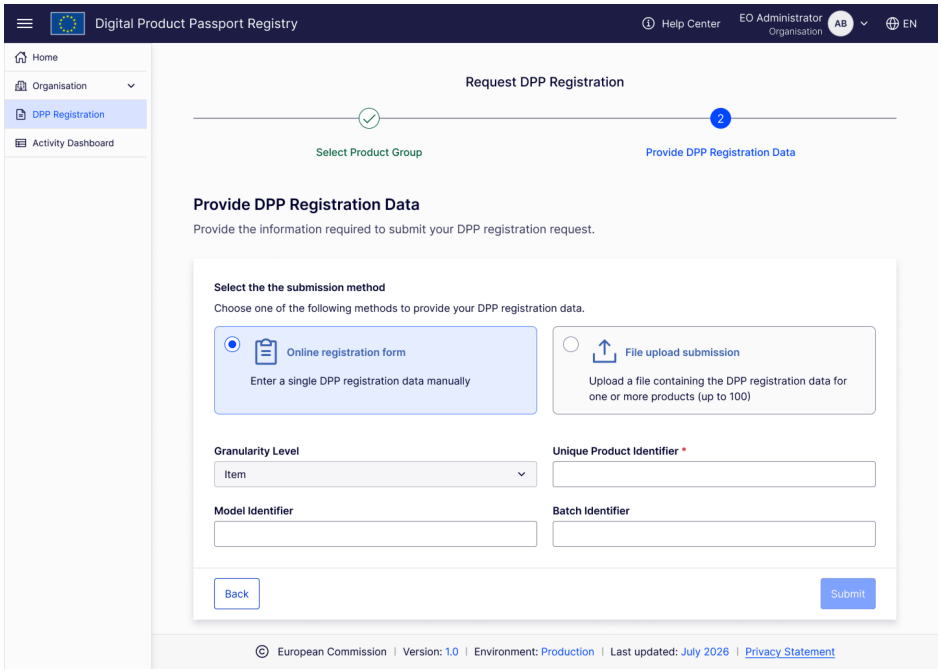

1. The "Batteries" product group is pre-selected. Click [Continue], to proceed.
    - **Product group** — The first product group for which DPP registration will be available is "Batteries".

> **NOTE**
>
> The DPP will be introduced progressively for different product groups, in line with ecodesign requirements under the Ecodesign Regulation following the ESPR Working Plan.
> For more information, please refer to the Digital Product Passport: Frequently Asked Questions (FAQ).

2. Select the submission method you wish to use to register the DPP(s):
    - **Online registration form** — With this method, you can enter the requested information for a single DPP using the form you get after selecting this option. For this method, continue with the steps on Submission via Online Form.
    - **File upload submission** — Using this option you can submit for registration a single DPP or a batch of DPPs. For this method, continue with the steps on Submission via File.

Submission via Online Form

To continue the DPP registration via online form:

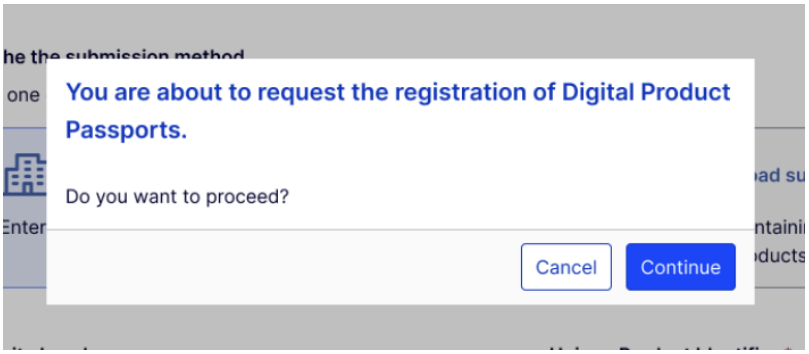

1. Select the level of granularity for the registration in question.
   This is the level of registration: *Model*, *Batch* or *Item*.

NOTE	Currently, only the *item* level is available and pre-selected, as it is the agreed and defined level for the *Batteries* product group. See also, Granularity.

2. Provide the following:
   - Mandatory
     - **Unique Product Identifier (UPI)** (*) — This identifier is essential to the registration as it uniquely identifies the DPP. The UPI is a mandatory value conforming to a URL format compliant with JTC 24 standards. Max length is 50 chars.
   - Optional
     - **Model Identifier** — An optional identifier you can provide. Specifies the particular *model* associated with the *item* being registered.
     - **Batch Identifier** — An optional identifier you can provide. Specifies the particular *batch* associated with the *item* being registered.

3. Click [Submit].

4. Click Continue to confirm the registration request.

Granularity

Each registration may be performed with different granularity, i.e., level of registration: *Model*, *Batch* or *Item*.

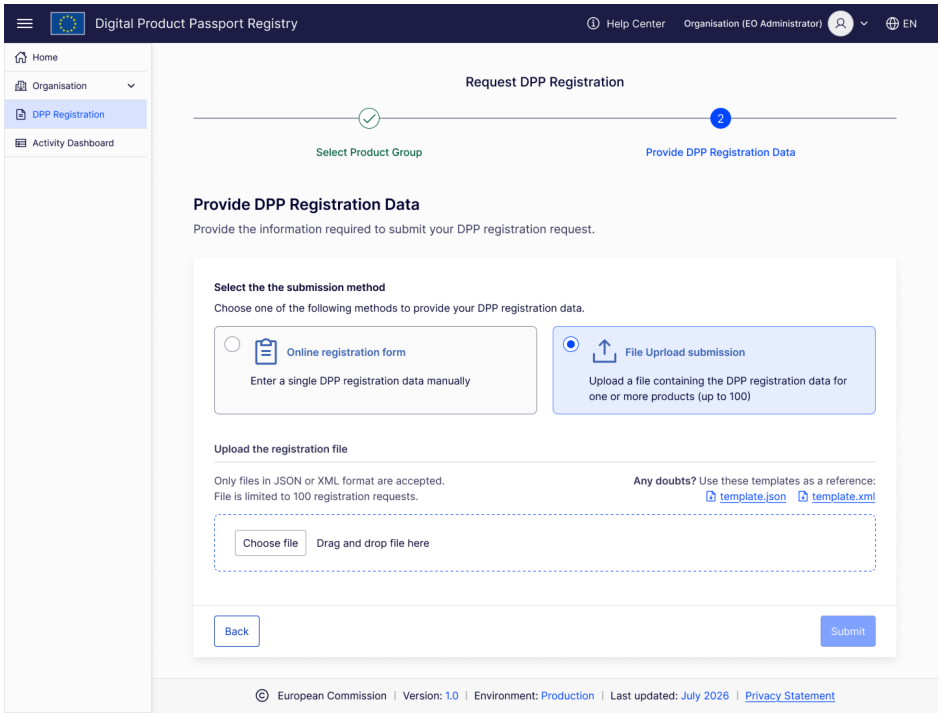

- **Model** — Refers to the general design or version of a product. When registering a DPP at the model level, it covers all items that share the same specifications and features within a given product family. It provides consumers information of the broader characteristics and compliance of similar products without focusing on individual units or batches.
- **Batch** — Refers to a specific production run of products made within a defined timeframe. Registering a DPP at the batch level means that it applies to all items produced during that particular run. It provides users with insights into quality assurance and compliance relevant to that specific batch, including manufacturing conditions and any variations that may have occurred.
- **Item** — Refers to individual products that are produced and sold. When a DPP is registered at the item level, it applies solely to that specific unit. This registration helps consumers get precise information about that one product, including its unique identification and any tailored compliance data specific to its manufacturing details, making it essential for consumers who want to track their specific item.

Your request will be assigned a correlation ID and provided a time estimation for the request's validation to be completed.

You can consult the status of your registration request in the **Activity Dashboard**.

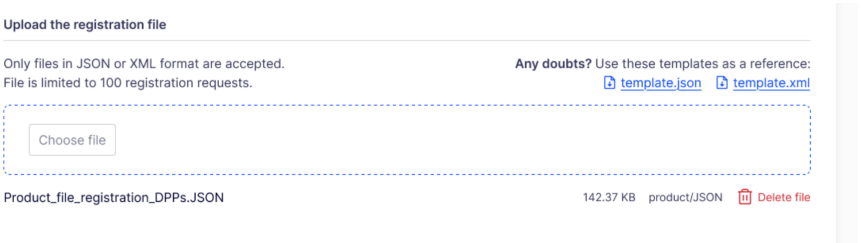

Submission via File

Via this method you can submit multiple DPPs for registration in a single operation. The maximum number of DPPs allowed for this batch submission is 100. The file submitted must be either an XML, or a JSON file. When you select this registration method, a template file is available for download for each of these formats.

To continue the DPP registration via file submission:

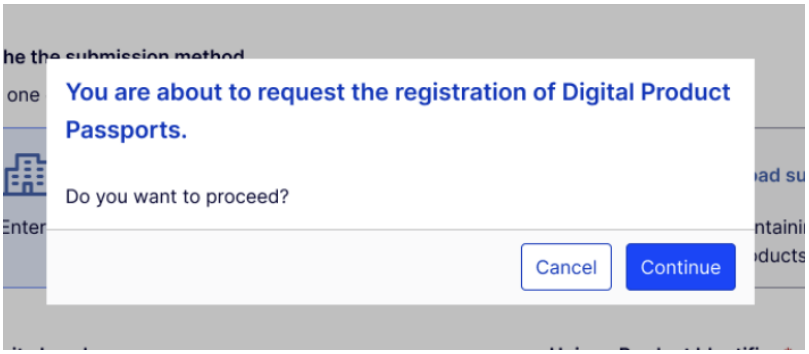

1. Drag and drop the JSON or XML file. Or click [Choose file] to browse your file system and select the file you wish to upload.

   Once uploaded, the file's name, size and format will be displayed below the drag-and-drop area.

   If you have uploaded a file by mistake, you can click on Delete file .

2. Click [Submit].

3. Click Continue to confirm the registration request.

Your request will be assigned a correlation ID and provided a time estimation for the request's validation to be completed. You can consult the status of your registration request in the **Activity Dashboard**.

Registration Submission Errors

During the submission, you can verify the following errors:

- **"The file exceeds the maximum allowed size of 1 GB."**
  This error indicates that the submitted file is larger than the maximum permitted size of 1 GB. Reduce the file size or split the content into multiple files before resubmitting.
- **"The file name contains unsupported characters."**
  This error indicates that the submitted file name contains unsupported characters. Rename the file using only allowed characters and try again.
  - *Allowed characters*: alphanumeric (`a-z`, A-Z, `0-9`), including: dot (`.`), underscore (_), hyphen (`-`).
  - *Rejected characters*: spaces(*and empty values), slashes (`/` or `\`), file path or folder navigation characters (e.g.`../`).
- **"Invalid URL format. Enter a URL starting with `https://`."**
  This error indicates that the provided URL is invalid or does not include the required `https://` protocol. Enter a valid HTTPS URL and try again.

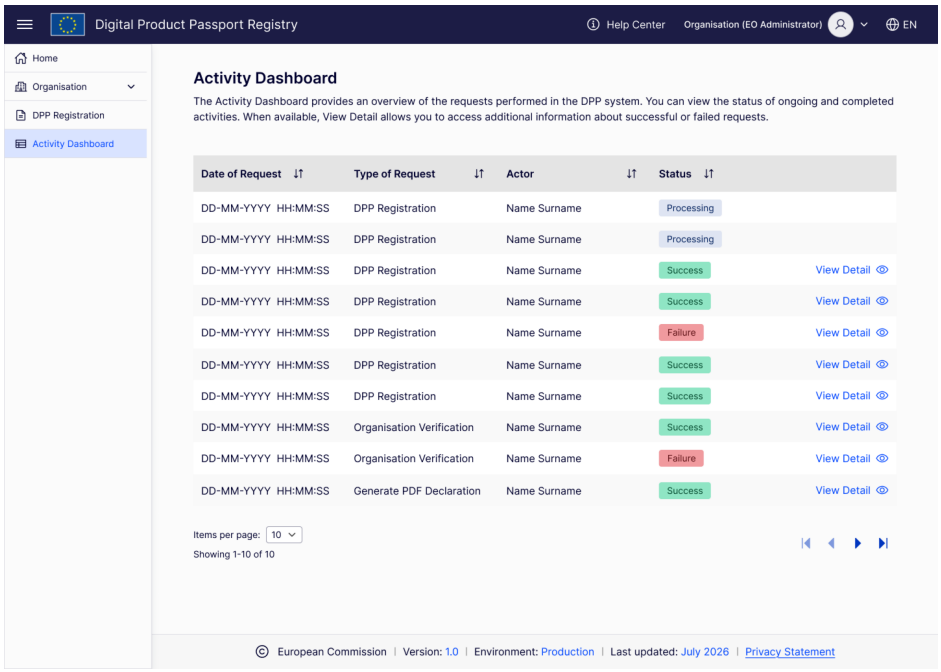

6.2.2. Registration Requests Outcomes

You can consult the status of your registration request in the **Activity Dashboard**. Select this option from the side menu.

IMPORTANT	When submitting multiple DPPs, if a single DPP has an error, all the DPPs in the same submission will be rejected.

Activity Dashboard - DPP Registration Requests Outcomes

A list of previous requests and their status is presented:

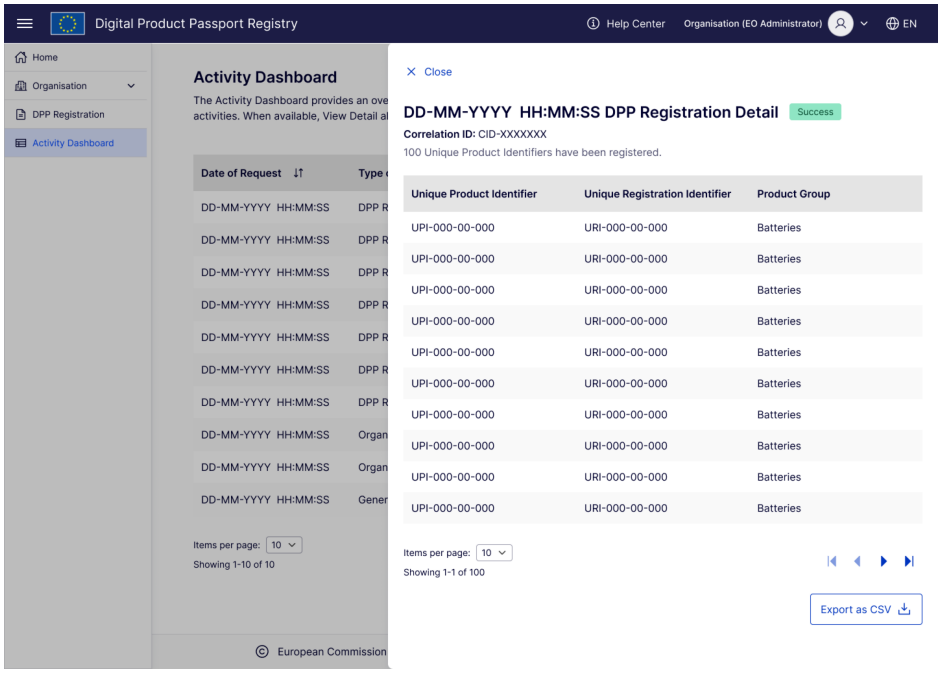

NOTE Successful registration of DPPs for batteries is not currently available, as the semantic content for this product group is under development.

Registration Outcome Details

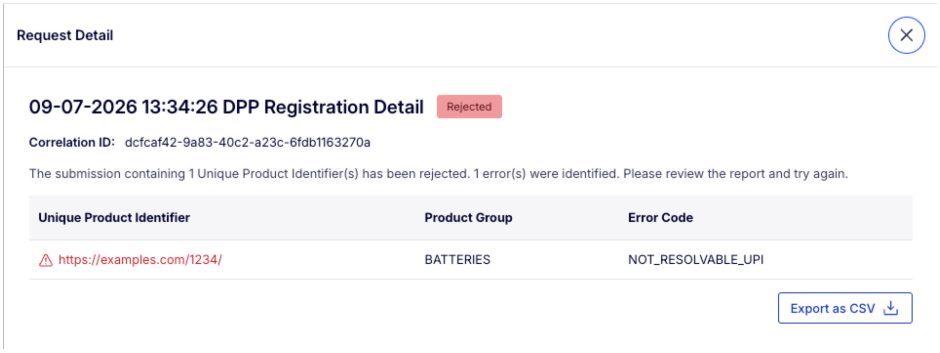

Requests for which validation has not yet been completed are listed as `PROCESSING` in the status column.

For completed requests (`SUCCESS`, `FAILURE`), you can click on View Detail , **View Detail** to consult more information.
This view provides, for all requests, the correlation ID regarding the submission. Also, for requests with outcome:

- `SUCCESS`: The corresponding UPI, URI and associated product group for each DPP.
- `FAILURE`: For each failed DPP, the corresponding UPI, the associated product group and, its specific error description.

Detail of a successful registration request

Detail of a failed registration request

Exporting Requests' Details

From each request's details, you can click on Export as CSV to export all the errors provided in the error report in CSV format.

To return to the Activity Dashboard page, from the top left hand corner, click "X Close".

Registration Validation Errors

When consulting the error details for a failed DPP registration, one or more of the following errors may be reported:

- **"The submitted file does not conform to the required schema."**
  This error indicates that the uploaded XML or JSON file does not match the

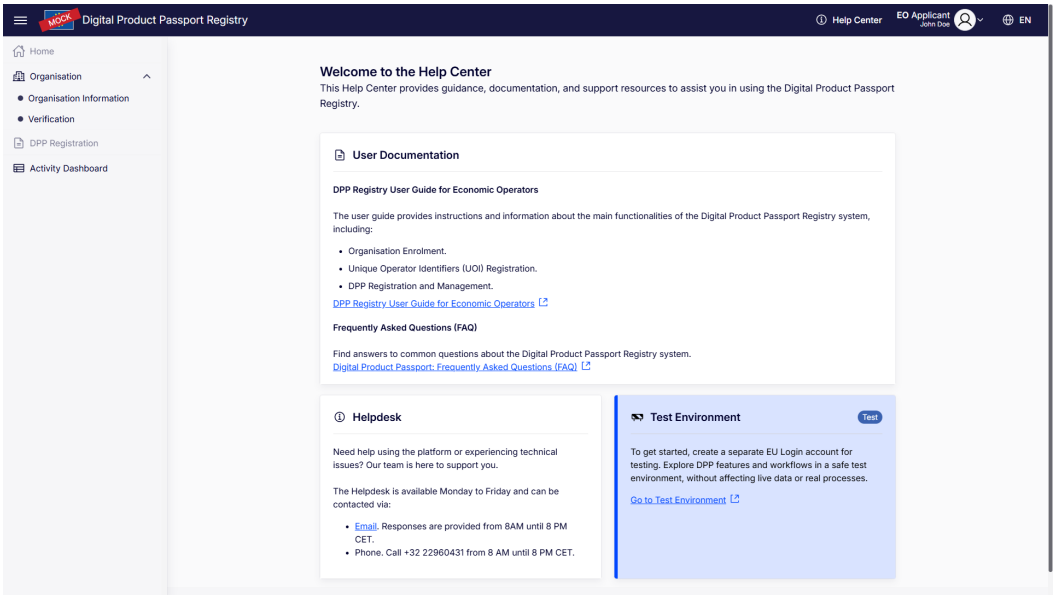

structure, format, or validation rules defined by the applicable DPP schema.

- **"The same unique identifier has been used for more than one DPP in the same registration request."**
  This error indicates that two or more Digital Product Passports (DPPs) included in the same registration request share the same unique identifier. Since each DPP must be uniquely identifiable, duplicate identifiers are not allowed.
- **"The UPI URL is invalid."**
  This technical error indicates that the UPI URL is invalid. The URL may be incorrectly formatted, use an unsupported protocol, refer to a disallowed domain, or specify a non-permitted network port.
- **"The submitted file exceeds the maximum of 100 registration requests."**
  This error indicates that the submitted file contains more than the maximum number of registration requests allowed in a single submission. The system accepts up to 100 registration requests per file. Files exceeding this limit cannot be processed.
- **"Semantic validation failed due to its unavailability."**
  This technical error indicates that the semantic validation service is not yet available, preventing the system from completing the validation of the submitted file.
- **"The system is unable to process your request at this time. Please try again later."**
  This technical error indicates that the system could not process the UPI at the time of validation. Possible causes include excessive URL redirects, redirects to a less secure protocol, or a response from the referenced resource that is exceeds the system's handling capacity.

Chapter 7. Help Center

Always accessible from the header, the Help Center, provides useful resources:

- User Documentation
- Helpdesk contacts
- Link to DPP's FAQ.
- Link to the Test environment

Chapter 8. Test Environment

The DPP Registry Test environment is a sandbox for testing and experimenting the processes and operations involved in enrolment (creating your organisation's profiles) and registration.

It is accessible from: http://registry.acc.product-passport.ec.europa.eu/.

TIP

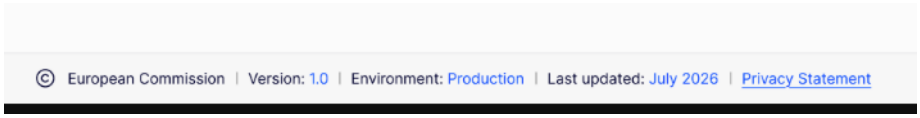

Test site

The Test environment, or the DPP Registry test site, has a different logo to help you distinguish it from the production site.

Production site

The DPP Registry production site will be identified as the *production environment* in its footer.

The Test environment is separate from the production site and so operations performed here do not affect any final or official data.

You will need to create or use a different EU Login than the one used for the DPP Registry's production site.

This also means that no modifications you perform in the test environment will be reflected or migrated into the production environment and any objects created may be deleted by a data cleaning routine.

The verification process used in the Test environment is the same as in Production. To create an organisation in Test, you must successfully verify it there using valid organisation data and the required signatures/seals.

Chapter 9. Glossary of Terms

Batch

A group of units of a product produced within a specific manufacturing run/timeframe under broadly consistent conditions. It covers variations that may have occurred during that run and provides QA/compliance information relevant to that group. When registered at the batch level, it applies to all items produced in that run.

Batch Identifier

An identifier that can optionally be provided in the registration. Specifies the particular *batch* associated with an *item* being registered.

Digital Product Passport (DPP)

A digital product passport (DPP) is a structured collection of data related to a product, shared via a unique identifier and accessible electronically via a data carrier, such as a QR code. By design, its purpose is to include information related to sustainability, and the preservation of value for reuse, manufacturing, and recycling.

DPP Registry

The database and its management system, and user interface, freely available for registration, consultation, search, selection, and other services, including via application programming interfaces (API).

DPP Data

The DPP data or the DPP's contents. This is a structured sequence of attributes, and their values after one of the required pre-defined schemas (XML or JSON) and, which constitutes the digital passport for a product (a model, a batch of items or a specific item). The DPP Data is created and stored by Economic Operators.

DPP Registration Record

A minimal set of data stored in the DPP Registry. The registration record holds the Unique Product Identifier (UPI), which identifies uniquely a specific DPP Data, and binds it with its Unique Registration Identifier (URI). The URI is provided by the DPP Registry as a result of the DPP Registration operation performed by the Economic Operator.

Economic Operator (EO)

The manufacturer, the authorised representative, the importer, the distributor, the dealer and the fulfilment service provider (as from Art 2 (46)

of Regulation (EU) 2024/1781)".

eIDAS Regulation (eIDAS)

Regulation (EU) No 910/2014, sets the EU-wide legal framework for electronic identification and trust services used in electronic transactions in the internal market. eIDAS sets rules for cross-border recognition and interoperability of notified electronic identification schemes. It harmonises the legal effects and requirements for trust services, including electronic signatures, electronic seals, electronic time stamps, electronic registered delivery, and certificates for website authentication. This helps enable secure and reliable online interactions across EU Member States.

EU Login

EU Login is the central user authentication service of European institutions, bodies, and agencies. Aligned with the main objectives of the European Commission Digital Strategy, it provides users with a single point of authentication to access EU services and applications.
It allows users to access a wide range of EU resources using a single account while adding a layer of protection to the sign-in process through multifactor authentication (MFA). EU Login can be used by any individual user, either on their own initiative or at the initiative of the organisation they represent, including through the automatic transfer of user information from the organisation to the Commission.

Natural Person

An individual (Economic Operator) acting in their own name.

Legal Person

A legally registered organisation (Economic Operator), such a company or other legal entity.

Legal Representative

The natural person with the legal ability to represent an organisation.

Model

A version of a product where all units share the same technical characteristics relevant to the label, and the product information sheet, and a model identifier, assigned by the manufacturer or by another economic operator acting as the supplier.

Model Identifier

An identifier that can optionally be provided in the registration. Specifies the particular *model* associated with an *item* or a *batch* being registered.

Organisation

The organisation represents the Economic Operator, a legal or natural person.

PDF Declaration

A model declaration featuring the data (name, address, contacts and identifiers) as provided by the organisation during enrolment used for identity proofing during the process of verification.

Product Group

A group of products that have the same main functionality.

Qualified Electronic Signature (QES)

A qualified electronic signature issued under eIDAS regulation and used by natural persons to sign electronic documents.

Qualified Electronic Seal (QSeal)

A qualified electronic seal issued under eIDAS regulation and used by legal persons or organisations to seal electronic documents.

Qualified Trust Service Provider (QTSP)

An authorised provider that issues qualified electronic signatures and seals eIDAS regulation.

Unique Product Identifier (UPI)

UPI or Unique Product Identifier uniquely identifies a DPP.
The UPI is a URL-based identifier. This is a mandatory DPP attribute's value provided by the user, the Economic Operator, when registering a DPP. This identifier must conform to a URL format compliant with JTC 24 standards.

Unique Registration Identifier (URI)

URI or Unique Registration Identifier is the identifier returned by the DPP Registry as a result of the successful registration of a DPP. This is the identifier for the record held centrally in the DPP Registry and, which connects to an existing DPP Data via an UPI.

Chapter 10. Helpdesk Contacts

Need help using the platform or having technical issues? Our Helpdesk team is here to support you.

- **Email:** EC-HELPDESK-DPP@ec.europa.eu
  Responses are provided Monday to Friday, from 8 AM until 8 PM CET.
- **Phone:** +32 22960431
  Available Monday to Friday, from 8 AM until 8 PM CET.
